PROFESSIONAL
EXPERIENCE

Backend devloper intern | 2025–present

frookoon

- Spearheaded the development of Frookoon's core backend architecture from the ground up, establishing a fast and scalable foundation for both user and rider apps using Java 17 and Spring Boot.
- Engineered a frictionless, password-free onboarding experience by integrating the Meta WhatsApp API and Redis caching, resulting in a highly secure and instant OTP verification system.
- Orchestrated an isolated, containerized database environment using Docker Compose, successfully combining PostgreSQL for permanent records and Redis for high-speed temporary storage.
- Developed and deployed clean RESTful APIs using Spring Data JPA, providing the mobile frontend teams with seamless, easy-to-use endpoints fully documented via Swagger/OpenAPI.
- Built the central matching engine responsible for the order lifecycle, utilizing database constraints and Hibernate to accurately route new deliveries to active online riders.

EDUCATION

SNJB’S KBJ college of engineering | 2024–2028

Btech in Artificial engineering and data science

- CGPA : fy 8.19
- technical team AARTs

CERTIFICATES

[Share Data Using Google Data Cloud Skill Badge](#)

Get Started with Pub/Sub Skill Badge

Get Started with Cloud Storage Skill Badge

Get Started with API Gateway Skill Badge

SKILLS

docker , java , python , postgresSQL , redis RESTful APIs , Swagger
